

GIS USERS OF NORTHERN OHIO

The **GIS USERS OF NORTHERN OHIO** (GUONO) is an informal group that promotes geographic data sharing, encourages data standardization, and provides a network for the exchange of technical information between all GIS users. Our goals include developing a forum for open discussion of GIS issues and encouraging personal communication between GIS users of all skill levels in the public, private, non-profit and educational sectors.

Mark your calendar and join us February 11th, 2010 from 1:30 to 3:00 at the Cleveland Metroparks' Canalway Center

For a presentation on: Using Silverlight to deliver effective maps — How the City of Hudson has been using the ESRI AGS Silverlight API

Earlier this year, ESRI released the ArcGIS Server API for Silverlight allowing developers to build Rich Internet Applications (RIAs) in the Microsoft Silverlight environment. Silverlight technology offers an ideal platform to deliver maps due to the advanced image rendering capabilities, cross browser and cross-platform support as well as the ability to build mash-ups—key components to any GIS web application.

We will show you the different applications we have built with this technology and explain how we did it. For users that have not seen this technology, we will show you how to put a Silverlight map together with some simple controls and publish it in less than 5 minutes.

With Silverlight 4 already on the horizon, we will discuss what is coming in the near future and where we hope to take this technology in the next year.

For users that may be interested in seeing some of the applications we will be discussing, visit our website at: <http://gis.hudson.oh.us/GIShome/>
